

**ENVIRONMENTAL POLICY
of Drukarnia Dimograf Sp. z o. o.
Updated as of 11.01.2021.**

Environmental protection is one of the most important factors determining the current operation of our company. It is becoming increasingly important due to the growing environmental awareness in the industry. We are striving to reach a point where printing production activities pose no threat to the environment. As a modern company, we want to be involved in the protection of the ecosystem by undertaking sustainable green initiatives. The main guiding principles of our strategy are:

- **Proper management of natural resources**
- **Promotion of environmentally friendly activities**
- **Reduction of emissions of pollutants into the air**
- **Waste reduction and recycling**
- **Compliance with all environmental legislation**

In view of these principles, we have already taken the following measures to reduce energy consumption and thus CO₂ and VOC emissions

- we have replaced old machinery with new ones with lower electric energy consumption
- we use environmentally safe inks and adhesives
- we recover the heat from machinery for use in heating the hall
- the electricity we purchase and use comes from renewable energy sources
- we use solar cells on the roof
- we have replaced solar lamps with metal halide lamps

We have a carbon footprint management plan according to Corporate CMF certification with the goal of lowering our carbon footprint. The FSC and PEFC certifications we use guarantee that wood from responsibly managed forests has been harvested to produce paper with this certification, without compromising biodiversity or forest structure

Waste

- we segregate waste
- we have an up-to-date permit for the generation of waste
- waste is collected from us by authorised waste recipients
- we transfer paper waste directly to the collection point for recyclable materials

We constantly monitor and comply with current environmental legislation.

We hold current permits for air emissions and waste generation

We submit annual reports on our environmental impact to the State Environmental Inspectorate. We have conducted an environmental risk analysis and, in accordance with it, are taking measures to reduce our environmental impact

WICEPREZES ZARZADU

Krzysztof Kantyka
