

ENVIRONMENTAL POLICY of Drukarnia Dimograf Sp. z o.o.

Environmental protection is one of the most important factors determining the current operation of our company. It is becoming increasingly important due to the growing environmental awareness in the industry. We are striving to reach a point where printing production activities pose no threat to the environment. As a modern company, we want to be involved in the protection of the ecosystem by undertaking sustainable green initiatives. The main guiding principles of our strategy are:

- **Proper management of natural resources**
- **Promotion of environmentally friendly activities**
- **Reduction of emissions of pollutants into the air**
- **Waste reduction and recycling**
- **Compliance with all environmental legislation**

In view of these principles, we have already taken the following measures to reduce energy consumption and thus CO₂ and VOC emissions

- we have replaced old machinery with new ones with lower electric energy consumption
- we use environmentally safe inks
- we recover the heat from machinery for use in heating the hall
- we use solar cells on the roof
- we have replaced solar lamps with metal halide lamps

Our FSC certificate ensures that timber for the production of paper with this certificate has been acquired from responsibly managed forests without compromising the biological resources and structure of these forests.

Waste

- we segregate waste
- we have an up-to-date permit for the generation of waste
- waste is collected from us by authorised waste recipients
- we transfer paper waste directly to the collection point for recyclable materials

We constantly monitor and comply with current environmental legislation.
